

Measuring Probe SP01

The probe SP01 is superior to LP02 because of its smaller diameter of the probe (8 mm) and finer square sensor.

The sensor contains an internal shield to attenuate the external noise. The probe and the cable can be separated from each other.

Technical data:

- Square spatial resolution : 6 mm x 6 mm
- Cable length : 1500 mm
- Measuring probe length : 600 mm (Customer specific lengths up to 1500 mm feasible)
- Measuring probe diameter : 8 mm
